Cloud Computing Lab (CS351) 2026

Rules for Conducting Labs

1. Students will be given assignments in the labs. They must complete the assignments within the assigned deadline.
2. TAs will evaluate each student based on the following components:
    a. Conceptual knowledge,
    b. Code implementation and execution, and
    c. Viva voce.
3. For any plagiarism/ai generated code, 50% points will be deducted for the respective assignment.
4. Attendance will be recorded twice during every lab session. Students must therefore attend the complete lab and remain present until the lab is formally concluded.
5. No extra time will be given once the deadline is met.
6. Late assignment submissions will not be considered for evaluation.
7. If a student is absent from a lab session, they will **not be evaluated** for that lab. They will also not be evaluated for the next lab session because the next lab evaluation would be based on the assignment given during the missed session. However, if the student has approved leave from the academic section, TAs may consider lab evaluation for the missed lab.
