Amazon Web Services (AWS):

1. Use free tier. (https://aws.amazon.com/free/)
2. Create a Root user account (using your email address). Set your password. There will be a step to verify your email address. In another step, you need to give your card details.
3. Login using Root user account. After login, you will be in the AWS management console.
4. Change region to Asia Pacific (Mumbai) -> ap-south-1
5. There is a billing and cost management service. Please check it for cost after you use AWS.
6. **IAM (Identity and Access Management):**
    a. IAM is used to manage user access. We can create an IAM user.
    b. We need to assign *policies* to the users. It talks about the user permission.
    c. Create an IAM user. Provide user access to the AWS management console. Create a custom password for the IAM user. Attach policies directly. Download the .csv file.
7. **EC2 (Elastic Compute Cloud):**
    a. Create an EC2 instance (or VM) by taking the 'Ubuntu' operating system.
    b. Create a new key pair. Then, take private key file format as follows:
        i. .pem (for Linux local system)
        ii. .ppk (for use with PuTTY in Windows local system)
    c. Attach a security group to the EC2 instance. We can use an existing security group or you can create a new security group. Allow SSH traffic (set this in inbound rules).
    d. Note, the public IPv4 address of the EC2 instance.
    e. Login to the EC2 instance from the local system.
    f. Use SCP (WinSCP for windows local system) to copy files from local system to the EC2 instance and from EC2 instance to local system.
    g. Take all the necessary screenshots.
    h. Always, terminate the EC2 instance after your work is done.
