CS351 - IT Workshop II (Cloud Computing)

Assignment 6

Total Marks: 30

Please follow the instructions below. Marks will be deducted if you do not follow these instructions.

(i)Screenshots: Take clear screenshots, resize the images to reduce their file size, and upload them to Google Classroom. Please do not upload a .zip file in Google Classroom.

(ii) Source Code Header: Include your name and roll number at the top of each source file using the following format.

Name: <Your Name>

Roll No: <Your Roll No>

(iii) Proper Comments: You need to write comments for each block of code, function inputs and outputs, and the working logic of the functions.

(iv) Proper Variable and Function Names: Please use meaningful variable and function names.

You need to create an RDS instance for a cloud application. Follow the steps below.

- Create an application for feedback on the personal website that you have developed as part of an earlier assignment. You can use a Flask application (in Python) for the feedback part. You need to deploy the feedback-related codes in Amazon EC2.
- When someone visits the site, they should be able to add a comment/message. Store these messages in RDBMS tables.
- Write a Python program using boto that creates the RDS instance with MySQL as the database and the corresponding tables. Use a security group with appropriate ports open.
- Open the public DNS of the newly launched EC2 instance in a browser and verify whether the application works.
